

HALO 5

Whole House Water Treatment Solution

uses Multi Reversing Magnetic Fields to Condition Water as well as 4 stages of filtration to deliver great tasting Chlorine Free water from every faucet, bath and shower throughout the house.

- Effectively controls hard water problems without the use of chemicals. Dissolves existing scale. Prevents new scale formations. Inhibits corrosion.
- Removes contaminants but does NOT remove minerals essential for human health from water, which also give the water taste.
- Like most mineral spring water, it leaves the skin feeling refreshed and clean and the hair feeling soft.
- Requires No Reverse Osmosis. Provides clean, clear and great tasting water from every faucet, bath and shower in the house.
- No need to waste water. Regenerated water is great for plants and landscaping.
- Limited Lifetime Warranty.
- No maintenance required.
- Dissolves existing scale. Prevents any new scale formations and inhibits corrosion without the use of chemicals.
- Eliminates the need for buying bottled water. The convenience of being able to drink delicious water from any faucet promotes the family to drink more water and contributes to a healthy lifestyle.
- Peace of mind for you and your family knowing that every drop of water flowing through your home has been filtered and conditioned by the finest whole house water treatment system available today.

Traditional (Chemical) Water Softeners were developed in 1938 using resin and salt or potassium chloride for regeneration.

- DOES NOT filter water.
- Requires constant addition of salt or potassium to water.
- Removes vital minerals.
- Residual salt left in household water makes skin feel slippery or slimy - a common complaint is, "I feel like I can't get the soap off".
- Requires Reverse Osmosis system to remove salt from water and make it drinkable. (One faucet)
- Water softeners only address hard water.
- Water softeners DO NOT dissolve or prevent scale.
- Softeners Regenerate up to 3 times per week; can waste more than 150 gallons.
- Regenerated waste water contains salt and cannot be used on grass or plants. Many communities are restricting softeners and are no longer allowing salt laden waste water to be put down drains because it pollutes ground water.
- Salt costs 25 times more to remove from water than to add in to water.
- Requires ongoing maintenance and repair costs.
- Many people continue to purchase bottled water for drinking and cooking.
